

Got numeracy?

Epiphany falls on January 6th, following the 12th day of Christmas, and marks the official end to the festive season for many Christians.

In the West, it is thought Christians began celebrating the Epiphany in the 4th century, associating it with the visit of the wise men.

How many centuries ago was this?

The wise men travelled a long way.
If the wise men travelled 750 miles, how many kilometres would this be?

Clue: 5 miles is approx. 8 km.
